WETSEL SEED CO.

Dependable Seeds Since 1911

HARRISONBURG, VA.

This is the way we started in the
Seed Business in 1908.

Founder

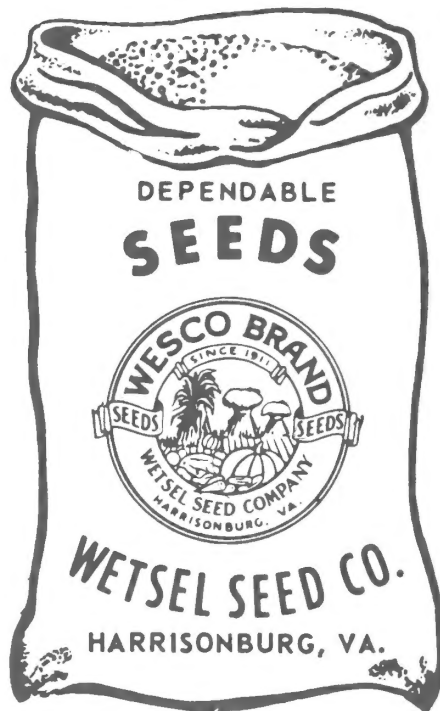

**A NAME TO
REMEMBER**

WETSEL

PREFERRED

BY THE MAN WHO CARES

Established 1911

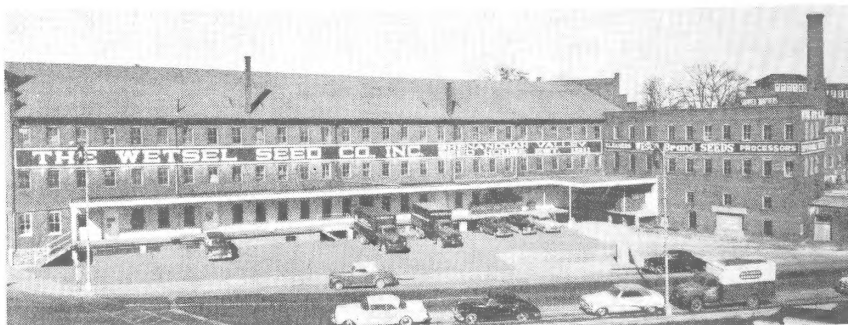

OUR 47th ANNIVERSARY

COVER—Field of Orchard Grass on shock at the farm of Mr. and Mrs. John Hopkins, McGaheysville, Virginia. Mr. Hopkins has original deed from King George of England dated 1765, made to John Man. Man sold property to Mr. Hopkins' Great Grandfather. Original purchase price for 95 acres was 10 Schillings (\$1.44). Home of the Hopkins' in background is 154 years old.

West Market Street Store, Office and Warehouse on Route 33. Office and Store remodeled in 1956. We now have much improved facilities.

Noll Drive Warehouse, (U.S. 11), devoted to processing and storage of seed and other merchandise. 50 Ton Public Scales on property.

WARRANTY CLAUSE: The Wetzel Seed Co., Inc., warrants to the extent of the purchase price that seeds or bulbs sold are as described on the container, within recognized tolerances. Seller gives no other, or further, warranty, expressed or implied.

Wetzel's Adapted Alfalfa Seed

How to Plant

Sow 15 to 25 lbs. to the acre in March or April

Well-drained loam or clay soil, with no hardpan underneath, will grow Alfalfa when properly prepared. Lime should be applied to soil that is too acid. Two to five tons of ground limestone per acre is recommended. half of this quantity of burnt lime after plowing. A firm seedbed is essential for a good stand of Alfalfa, and the soil should, therefore, be prepared well ahead of planting time. Harrow the land frequently to destroy all weeds.

Alfalfa needs fertilizer rich in phosphoric acid and potash. When seeding apply 600 to 800 lbs. or more of 0-14-6 fertilizer per acre, increasing the amount of potash on sandy soil. Top-dress established plantings each spring with 300 to 400 lbs. of 0-12-12 fertilizer per acre. Best results come from having the soil tested and adding the elements needed.

ATLANTIC ALFALFA

Certified

Atlantic Alfalfa is a high-yielding, fast recovering variety selected by the New Jersey Agriculture Experiment Station. In many characteristics, Atlantic is similar to Grimm, and is classified as a variegated alfalfa. It is not resistant to the bacterial wilt disease, but in many areas where bacterial wilt is not a factor, it is one of the best yielding varieties. It is better adapted to the eastern United States than most of the standard varieties.

BUFFALO ALFALFA

Certified

Buffalo Alfalfa is an improved strain of Kansas-grown seed developed from selected stocks from Kansas fields. Although in reality the same type of Alfalfa, it is an improved strain, being more resistant to wilt, blight and other diseases as a result of selecting the more healthy and vigorous stocks over a period of years.

DU PUIITS ALFALFA

(Say "doo-pwee")

CERTIFIED

DuPuits is a vigorous, relatively high-yielding alfalfa which shows fast growth recovery following cutting. It was developed by Tourneur Freres of Coulommiers, France, and was first tested in the United States in 1947. Results from scattered tests in this country show DuPuits to have good seedling vigor, moderate winter resistance (similar to Buffalo), and satisfactory forage yields in areas where adapted. It has shown some tolerance or possible resistance to leaf spots.

Inoculate with Nitragin

The best investment you can make in connection with the planting of alfalfa (as well as all legumes) is to inoculate the seed before planting. Leaves contain over three times as much protein as the stems. Inoculation increases both leaf and protein content of the leaves.

GRIMM ALFALFA

VERIFIED

The chief difference between Grimm Alfalfa and the so-called Common strain is reflected in the root system and habit of growth.

The Common variety is characterized by a long straight (and sometimes very large) root—often called a "tap" root. It has very few small, or feeder roots. In sharp contrast, Grimm roots are far more numerous, spread over a wider area, similar to Clover. Ideal for wet soil.

KANSAS ALFALFA

U. S. VERIFIED

It had been assumed that the advent of newer strains of Alfalfa would probably impair the demand for Kansas-grown seed. This may still occur, but demand in the last year has been very urgent, possibly because of the heavy demand for all Alfalfas. Anyway, this continues to be very popular. You are always safe in using Kansas Alfalfa.

"NARRAGANSETT" ALFALFA

(Certified)

Well adapted to the colder soils of our highlands Long-lived . . . particularly good where stands are to be left down three years or more. Has attractive, dark green color—heavy yielding—very hardy. Comes through well on a wide range of soil conditions even sometimes on heavier soils where other varieties could not make a decent showing. "Narragansett" sets smaller amounts of seed than most other popular varieties; therefore seed production costs are higher, and the seed sells at a premium. "Narragansett" is destined for wider popularity.

OKLAHOMA ALFALFA

APPROVED

We have sold and recommended it for many years and it has always given good results. It is one of the taller Alfalfas and is on the recommended list.

RANGER ALFALFA

CERTIFIED

Ranger is a very good strain of Alfalfa, being very popular in areas where unusual hardness is required. Because of the comparatively mild climate in this area, hardness is not required here, consequently the demand has been limited.

VERNAL ALFALFA

CERTIFIED

VERNAL—New winter hardy, wilt resistant variety from Wisconsin. Outstanding in forage production in hay and pasture trials. Adapted throughout state. Flowers are a mixture of purple, blue, green, yellow, reddish colors. Its extensively fine leafiness produces excellent hay.

WILLIAMSBURG ALFALFA

CERTIFIED

WILLIAMSBURG—A variety of common alfalfa developed in Virginia, and believed to have several advantages over the older strains. It has proved valuable in Virginia as well as other eastern states because of its resistance to stem rot. In areas of high humidity and summer rainfall it persists better than most other varieties. Due to its popularity, there has not been enough seed to supply the demand.

CLOVERS

RED CLOVER

Is still the leading Clover, especially where crops are rotated. It matures so early that it may be followed by a second crop such as additional hay, late pasture, or a cash crop from seed for which there is usually a ready demand. Ask for Virginia grown seed.

MAMMOTH or SAPLING CLOVER

Widely used for seeding with timothy and then cut as hay. Maturing later than Red Clover, it ripens more uniformly with timothy.

KENLAND CLOVER

Certified Blue Tag

Kenland developed some years ago as a superior strain of clover. The demand for Kenland is on the increase. Plants are more healthy and vigorous, also more resistant to disease, consequently it generally produces a greater yield and in the final analysis yield is most important.

SWEET CLOVER

One of the best crops to improve the soil. It will grow in almost any kind of ground, but best results come when the land is amply limed and the seed inoculated. When sown in the spring a nurse crop should be used to keep down weeds. Small grains such as oats or fall sown grains are good for this purpose. Sow 15 to 20 lbs. of sacrificed or hulled seed per acre in late February, May and April. Usually either White or Yellow Blossom is available. Yellow is somewhat smaller and about ten days earlier than the white.

WHITE DUTCH CLOVER

For lawns and pastures. Produces a low, compact growth, covering the ground like a carpet, but is more satisfactory when in mixtures with other grasses. Sow in spring or fall, 8 to 10 lbs. per acre if planted alone.

SEE INSERTED SHEET FOR PRICES

As on other farm and grass seed pages, except Corns, we are omitting prices because of their fluctuating character, which often renders them worthless before the catalog comes off the press. See inserted current list.

LADINO CLOVER

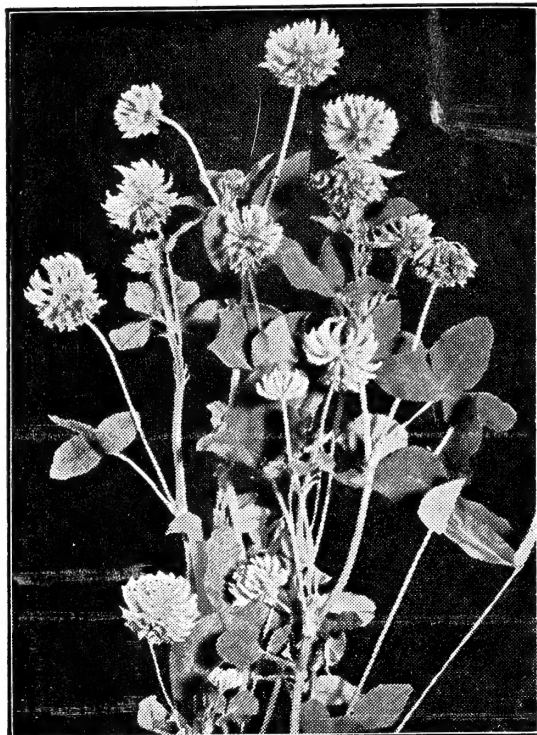

Ladino is now so well established that it has assumed a permanent role in pasture mixtures. It is sometimes seeded alone, but usually with other grasses, notably orchard grass and/or Kentucky 31 Fescue. Sow 1 to 2 lbs. per acre.

ALSIKE CLOVER

A very hardy Clover that is growing more popular in recent years because it frequently takes hold where other Clovers fail, specially in low, wet soil or high gravel ground. It provides desirable hay, and is excellent for improving the soil. Sow 6 lbs. to the acre, or 1 to 2 lbs. in mixtures.

CRIMSON or SCARLET CLOVER

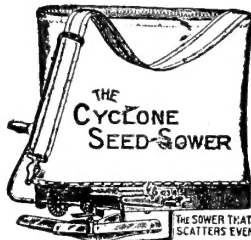

One of the best crops for green manuring and furnishes fine pasture in fall, winter, and spring. It improves poor land and through its nitrogen-gathering properties restores the fertility. May be planted in fall, spring or summer. Sow 15 lbs. to the acre.

RED CLOVER

Broadleaf Birdsfoot Trefoil

As noted here before, it is somewhat akin to Ladino, and some think that it is superior in several respects. For one thing, it is adapted to a wider variety of soil and climatic conditions. Another factor in its favor as pasture, is no known case of bloat on record. Goes well with Blue Grass

Cyclone Seed Sower

Regular—
Price \$3.95
Heavy Duty—
See or Fertilizer \$5.25

Horn Sower

Price \$1.55

SUGAR CANE (For Syrup)

SUGAR DRIP AND HONEY DRIP

Large growth, often yielding up to 65% of its total weight in juice. Well adapted to this area. Early Organic. Excellent for both forage and sorghum.

WACONIA SORGHUM—For Syrup

A newer variety which is reported to be the highest yielder of all the syrup type sorghums. Makes a large juicy, succulent growth. Will yield about 65% of the weight of the cane in juice when extracted properly. Makes a good seed yield which can be sold for feed and has food value above that of corn.

THE WETSEL SEED CO., INC.

SHENANDOAH VALLEY'S MODERN SEED HOUSE

DWARF ESSEX RAPE

Extensively used as pasture for cattle, sheep, hogs, and poultry. In a good season will continue to grow after being grazed. Sow in spring 4 to 5 lbs. per acre in rows or 8 to 10 lbs. when broadcast. Prepare ground as you would for corn.

HAIRY VETCH

Valuable as a winter cover crop to fertilize the soil, to prevent leaching, and also, to furnish forage. A good mixture often used in the spring is 15 lbs. Vetch and 1½ bu. oats per acre. If sown alone, plant 20 to 25 pounds per acre.

GERMAN MILLET

Millet requires fertile soil and good growing conditions. Sown with cowpeas or soy beans, use 3 to 5 lbs. per acre, or 30 lbs. per acre if seeded alone for hay. Where a seed crop is desired, sow only 20 lbs. Drill or broadcast from May to July.

BROOM CORN

Standard Evergreen. Grows 8 to 10 feet high and yields heavy straight brush free from large center stems. Ready to cut in 90 to 100 days.

Virginia has an average annual rainfall of 42 inches. About 15 inches are lost in "run-off" water. Use grass on hills and slopes.

WETSEL'S QUICK PERMANENT PASTURE MIXTURE

Contains Domestic and Perennial Rye Grass, Orchard Grass, Ky. 31 Fescue, and Certified Ladino Clover. Sow 25 pounds per acre.
22 cts., lb., \$20.50 per 100 lbs.

CANADIAN TYPE PERMANENT PASTURE MIXTURE

Contains 12 Kinds of Legumes and Grasses

Certified Perennial Rye Grass	White Dutch Clover
Lincoln Brome Grass	Orchard Grass
Alta Or Ky. 31 Fescue	Creeping Red Fescue
Certified Ladino Clover	Poa Trivialis
N. Z. White Dutch Clover	Red Top
Timothy	Ky. Blue Grass

Sow 25 to 30 pounds per acre—Price 28 cts., per lb. \$26.25 per hundred pounds.

An acre of soil 6 feet deep weighs about 1,500 tons. A corn field under study by VPI scientists lost 93 tons of soil in one growing season.

WETSEL'S PERMANENT HAY AND PASTURE MIXTURE NO. 7

Consisting of Ladino Clover, Orchard Grass, Kentucky 31 Fescue, Approved Alfalfa, Alsike Clover, Hulled Oat Grass and Korean Lespedeza.

Designed for Fall or spring sowing on grain crops or pasture land needing improvement. It should be borne in mind that once a good grass stand is established, future results will depend largely on how well you treat the pasture or hay field. If a high level of fertility prevails, the method and intensity of grazing will determine the life of stand. If grazing or cut below 4 or 5 inches, plants are weakened, making recovery slow. Sow 20 to 25 pounds per acre. 26 cts., lb. \$24.75 per 100 lbs.

Remember

WETSEL'S POND MIXTURE

IT FILLS A GREAT NEED

Our POND GRASS SEED MIXTURE contains six grasses and legumes, all permanent or perennial except the Domestic Rye Grass. The Rye Grass is added to give you a quick sod and to hold the banks or terrace until the slower growing grasses become established. Sow at the rate of 30 pounds per acre. 22 cts. per lb.

Seed Oats

2 Bushels for Grain and 3 Bushels for Hay

Oats has developed into a major spring crop. Winter variety should be seeded February 1 to March 20, spring varieties from March to mid-April. We treat all of our Seed Oats with Panogen to control smut and other diseases.

Certified

Winter or Spring Oats

ANDREW (Spring)

By far the most popular Spring variety for grain crop. Out sells all other Spring Oats several times. Reasonable free of crown-rust and other diseases. You can depend on the Andrew Oats.

CLINTON NO. 59

(Spring)

Has been a very good Spring Oats for years. No. 59 is an improvement over the original strain. Early maturing variety, medium height. Not as popular as the Andrew but is preferred by some growers.

"CLINTLAND" OATS

(SPRING)

New crown-rust resistant variety, developed in Indiana. Gaining popularity fast. In Virginia tests to date, "Clintland" has outyielded Clinton varieties by 10 bushels per acre. This is substantial. Yet it would be much greater in a year when a crown rust epidemic would strike. "Clintland," of like appearance to "Clinton 59," and "Clinton 11" has all their good qualities, plus the big advantage of crown-rust-resistance. Recommended by Agronomy Department at Blacksburg.

VICTORGRAIN 49-93

WINTER AND SPRING VARIETY

This variety has been grown here in the Shenandoah Valley for several years. Has been very popular in North Carolina, South Carolina and other Southern States. Due to the short supply of other popular varieties such as Forkadeer, Arlington and Lee Cold Proof the Victorgrain 48-93 will be used by many growers in Virginia and is recommended by the Agronomy Department at Blacksburg. We know you are safe in using the Victorgrain if you sow them from February 1, to March 20. We have Certified stock.

WOODGRAIN

WINTER AND SPRING

Another good variety used in other section of the state particularly around Richmond. Also because of the short supply of good seed oats the Woodgrain will be recommended for Spring planting in the Shenandoah Valley. Not a tall oat but a good producer.

Due to short supply and big demand last Fall we are not in a position to offer our three popular Winter or Spring Oats, namely, Forkadeer, Arlington and Lee Cold Proof. Instead, the Agronomy Department at V.P.I., Blacksburg is recommending the Victorgrain 48-93.

PLANT WINTER OATS VARIETIES UP TO MARCH 20

Oats continue to increase in popularity as a hay and Ensilage crop

Soy Beans

On the farm Soy Beans may be mixed with other grains to make a high-protein feed. As a hay, they are similar to alfalfa in feed value. The best time for planting is from late May 20 to July 15, but it may be done as late as August 15. Sow 60 to 90 lbs. per acre broadcast, or 45 to 60 lbs. in drills. Be sure to inoculate—use Nitragin.

VIRGINIA (Brown). Matures in about 125 days. Also a popular variety in this section. Is well known for its excellent hay and ensilage. Well-filled pods borne on strong vines, easy to cut and cure.

WILSON (Black). Matures in about 120 days. By far the most popular variety in this area. Used primarily as a hay crop. Makes an excellent green manure. A small-seeded kind bearing pods well above the ground.

S-100 (Yellow). A rather new variety in the East but has already acquired many loyal friends. One of the earliest maturing varieties, which especially commends it to the higher-altitude, short-season areas. High yielder of uniform medium height, standing up well, Yellow, small to medium seeds. Seldom shatters at harvest.

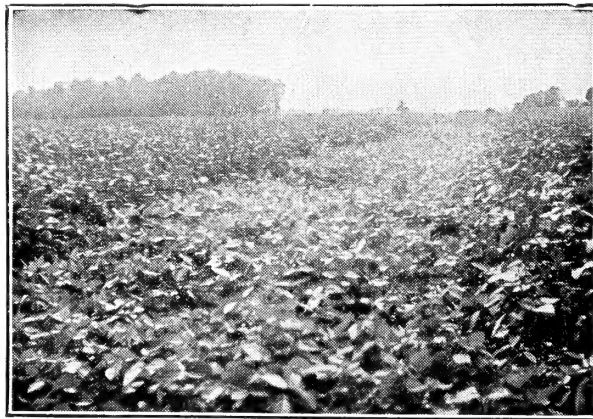

SPRING BARLEY

Moore Variety

Sow as early as possible in spring, preferably in early March. Use a high potash content fertilizer. Mix 150 lbs. Nitrate of Soda per ton of fertilizer. Can be applied when seeded or as top dressing later on.

COWPEAS

Mixed Cowpeas. A mixture of good varieties is usually more satisfactory, especially for soil improvement, for the combination is better able to withstand extremes of weather.

SOYBEAN FIELD

One drill row thru center not inoculated. Remainder of field inoculated with NITRAGIN.

RID FARM OF RATS AND MICE

with D-Con Products

GRAIN and FORAGE SORGHUM

MARTIN COMBINE MILO

Is still highly recommended for areas of low rainfall. Should be grown where grain production is the main objective. The stalk is less palatable to livestock than some other grain sorghums and is one of the lower yielders, but this is offset by its advantages of early maturity, open heading, quick-drying and good exsertion from the boot. Grows to height of 2½-4 feet, matures in about 100 days and combines well. Sow 10 to 15 lbs. per acre in rows.

HEGARI—Tall

Considered the nations leader of all grain sorghums, grown where average rainfall is relatively low. This white grain sorghum is grown in a wide range of areas throughout the country. It is an extremely heavy yielder and makes fine ensilage, bundle feed and pasture. Hegari grows to a height of 4-5½ feet with an abundance of leaves—(13-16) making it highly desirable for forage or pasture.

BLACK AMBER CANE

For forage only. Sow 40 to 50 pounds per acre broadcast. The tonnage per acre is enormous. The quality good.

SWEET SUDAN GRASS

In wide use in Virginia for years. Not

recommended for hay, unless a hay conditioner is used, but is hard to beat for grazing and silage. Sow at least 35 pounds per acre after May 10. Use 500 to 800 pounds of 10-10-10 fertilizer per acre. If cut when 36 inches tall makes very good hay. Better for pasture than hay.

PEARL or CATTAIL MILLET

Last year proved there is a need for more grazing on most Virginia farms during July and August. Pearl or Cattail Millet and Sudan Grass can help you provide additional grazing for your live stock during these dry months. One acre will usually take care of two animals during the critical period. Broadcast 25 to 30 pounds per acre after the middle of May. 500 to 800 pounds of 10-10-10 fertilizer per acre is recommended. It is better for pasture than hay or silage.

EARLY HEGARI—Combine

Especially adapted to regions of high altitudes and where there is a low average of rainfall. Does well where ordinary Hegari cannot be produced satisfactorily. Does well in heavy clay soils and where grain sorghum is used as catch crop after small grains. Grows to height of 3-4½ feet, bearing 11-12 leaves.

ATLAS SORGO—Certified

Few crops, if any, in recent years have filled a need and become so popular as did Atlas Sorgo. Recommended strongly a few years ago by the Wetsel Seed Company and their many dealers and is now used on most farms. Believed to be the best Sorghum for silage planted with ensilage corn or alone. With corn 5 to 10 pounds per acre. Alone 30 to 40 pounds per acre, stands up better than corn.

DeKalb Hybrid Sorghum

HARRISONBURG, VA.

A hegari type which produces an outstanding grain yield. It is not as tall as Atlas Sorgo, although about the same maturity, but provides a heavier stalk with broad green leaves. The height is about 6 ft. but this may vary with different soil and weather conditions. The short nodes, which means that the leaves are closer together and the semi-sweet heavier stalk makes it excellent for silage. It normally is ready for the silo in about 105 days and the tonnage is very good producing up to 26 tons per acre. It is earlier than Tracy, Sart, and Honey.

The DeKalb Forage Hybrid was released for sale last year. The quantity is limited. The price is \$11.00 per 50 pound bag.

Wetsel's

Adapted Seed Corn Hybrids

Open-Pedigree Hybrids

U. S. 13

The interesting thing—and certainly the practical fact of the matter—is that U.S. 13 continues to be the leader. We sell many more bushels of it than all other open-formula hybrids combined. This fact is presented as a matter of information.

Also it is adapted to a wide range of soil fertility and seasonal influences.

U. S. 262-A

U. S. 262-A. Continues to enjoy popularity in some circles. Is a larger corn than U.S. 13, making it a later maturing variety. Accordingly it is better adapted for ensilage—some farmers contend it is the best ensilage they have ever grown. Is also a good crib corn which makes it a good all-purpose corn, where adequate fertility and moisture are present.

U. S. 99

Remains in persistent demand by some farmers who desire a larger foddered corn for ensilage. It is too large and too late for short season areas and for medium or low fertility soil.

OHIO C-54

(Early—About 100 Days)

Because it is early maturing and possess many other desirable virtues, it is the most popular "open-pedigree" early hybrid. Produces well on thin land and in high altitudes, where seasons are short. Has shown lots of vigor, making it more free of blight, wilt and other diseases. Some think it is resistant to ear-worm and corn borer. It is noted for retention of greenish color, while ear is maturing, thus producing good, full ears of deep kernels.

Wetsel's

Open Polinated Corn

Want More and Better Ensilage?

Then plant 5 to 10 pounds of ATLAS SORGO per acre with your ensilage corn. Also plant 30 pounds of Atlas Sorgo alone per acre for forage silage. 13 cts. per lb. \$12.00 100 lbs. Certified.

REID'S YELLOW DENT

120 days. Yellow Dent strains are the most popular yellow corn, especially in the East. Usually produces show-type ears ten or so inches long. Deep-grain, wedged close in a medium size red cob. High shelling per cent. Good yield, high feeding value.

BLOODY BUTCHER

100 to 110 days. A well-known and, in some sections, popular Corn. A persistent, limited demand prevails each year, despite the wide use of hybrids.

EUREKA

115 days. A first-class sort for either ensilage or feeding, if allowed to mature.

PAMUNKEY

An extra-heavy producer. Strong, vigorous stalks 13 to 15 feet high; usually bears two large ears.

ISOTOX 25 SEED TREATER

Protect your corn from Wireworms, Maggots and other soil born insects. 4½ oz. size treats 1 bushel of Corn

Also, recommended for most all garden seeds. Very economical and increase yields by protecting seed from soil insects and seedling diseases. Easy to use, just add to planter box and stir at time of planting. 4½ oz. \$1.35, 1 lb. \$3.45.

"FUNK'S G—BEST BY TEST"

The producers of Funk's G Hybrids each year conduct research plots throughout the state of Virginia to determine the best corns for each area of the state. Also Funk's G Hybrids are tested each year in Experiment Station in our state. We offer for sale only those Funk's G Hybrids that have proven themselves to be well adapted to our area and to give our farmers the "best by test".

Descriptions of the best Funk's G Hybrids for your farm are listed below.

G-76

A new hybrid, earliest of G Hybrid we handle. Leafy with sturdy stalk, long well-balanced ears with nice kernels. Ear well-placed and a good yielder. This is also used for early husking in short-season locations. On V.P.I.'s recommended list.

FUNK G-91

Introduced four years ago in response to the urgent demand of Virginia farmers for a high-yielding, good quality early Funk G Hybrid; Will reach complete maturity in 100 to 105 days and is known as a "hard little fighter" under adverse conditions. Ears are big and long, placed low on short stalks, making it ideal for either mechanical or hand picking. Adapted to a wide range of soils.

G-99

(112 to 115 days) Grows exceptionally long ears. High yielder on medium to low-fertility soils. Contains one bloodline out of old 'Lancaster Sure Crop'.

FUNK G-134

Starts off very fast in spring and keeps right on growing. Produces lots of dark green foliage, giving it eye appeal during growing season. Ears exceptionally long and covered well on tips with husks. Has ability to stand up under severe insect attacks and windstorms. Best adapted to soils of medium to higher fertility. Requires about 120 days for maturity and resists corn-borers.

G-144

(110-115 days) Outstanding wherever planted. Short fodder. Thick leafy stalk. Good color. Girthy, quality ear. Very blight-resistant. Really stands up. Low-eared, tailor-made for corn-picker. Gaining rapidly on superior performance.

FUNK G-704

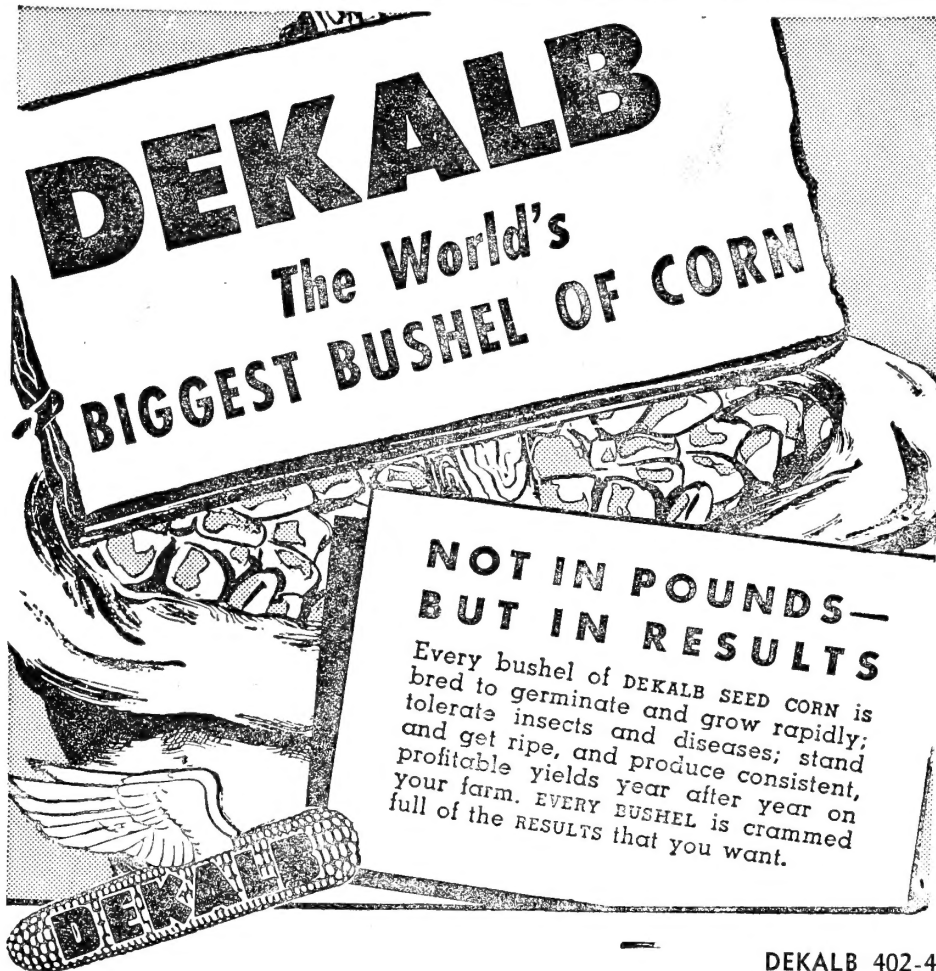

(Popular Ensilage)

A fine late variety of yellow Corn, recommended for late harvest or ensilage. Requires about 120 days for full maturity but can be harvested earlier for the silo. Is also a high-yielding Corn, as late varieties go, and consequently provides high-quality ensilage. Ears hang downward, thus preventing water from lodging inside the husk. Has unusual standing ability, which is especially desirable in a late Corn.

Heavy losses are sustained each year in many areas by crows. It is now easy to prevent damage by crows to corn and other comparable seed.

This wonderful new product is called "CRO-GO." It is applied by the simple application of a dry powder substance. This can be done with both ease and speed, also at a low cost. Ample supply for 1 bushel of corn costs only 50 cents roughly 6 cents for an entire acre. Try some of it and discover for yourself how economical and effective it is. Further information available for the asking. 1 bu. size 50 cts. Ask your dealer for CRO-GRO

DEKALB 803-A

A long husk covering giving excellent protection from weevil. The ear is quite smooth with a small kernel indentation and medium kernel depth. Matures later than the other 800 series.

DEKALB 837

Has an outstanding yield record under a wide range of conditions. Ears are long and uniform with kernels of medium depth and indentation. Medium height stalks with exceptionally good standing ability. One of the most resistant varieties to leaf blight.

DEKALB 893

This variety, because of its leaf blight resistance and consistent yield, has become one of the most popular varieties in this area. Has long solid ears and dark green plants of medium height.

DEKALB 925—WHITE

Dekalb 925 is a consistently high yielder of medium length ears borne on stalks of medium height. Has been a white corn leader for several years.

DEKALB 1051—FOR SILAGE

A tall variety with good grain yields and excellent husk cover. Gives a high yield of nutrients as either silage or fodder.

DEKALB 402-406 and 423

These three varieties will stand and yield well. Will mature before frost even if planted quite late. If planted early, can be harvested soon enough to plant an early fall crop. All three varieties have an outstanding yield record. We suggest you give 423 a try this year.

DEKALB 630

A medium early corn with relatively smooth dent. Ears are of good length and medium kernel depth. A medium height plant which produces an ear with good husk covering and results in high quality ear and grain yield.

SHENANDOAH VALLEY'S MODERN SEED HOUSE

WETSEL'S *Dependable* VEGETABLE SEEDS

TOPCROP

Pole or Cornfield Beans

Pole Beans are sensitive to cold and should not be planted until the ground is warm. Use poles 6 to 8 feet long, set firmly 3 feet apart in rows 4 feet apart. If planted in hills, sow five or six Beans in each. May also be planted with corn.

KENTUCKY WONDER, BROWN-SEEDED. 65 days. A profusion of round meaty pods, often 9 to 10 inches long. Very popular.

KENTUCKY WONDER, WHITE-SEEDED. 62 days. Long, brittle, stringless pods, finely flavored.

WHITE McCASLAN. 65 days. Green pods 8 to 9 inches long, slightly flattened. White seeds.

KENTUCKY WONDER WAX. 70 days. Flat, yellow, stringless pods.

BEANS

DWARF OR BUSH GREEN-PODDED

Plant every two weeks from April to August, at the rate of ½ pound to a 50-foot row. Sow Beans 3 inches apart. 1½ to 2 inches deep, in rows 2 feet apart. Cultivate frequently but never when the plants are wet.

BURPEE'S STRINGLESS. 54 days. Pods 5 inches long, slightly curved, round, dark green and fleshy. Very popular especially for canning.

CONTENDER. 57 days (Stringless) A fairly new introduction of dark green round oval pods, almost fiberless, very productive on 18-20 inch plants.

DWARF HORTICULTURAL. Snap pods 63 days, green shell Beans 60 days. Plant medium small, thrifty and productive.

GIANT STRINGLESS GREEN-POD. 56 days. Excellent for market gardeners, shippers, and canners. Pods round, 6 inches long, entirely stringless.

TENDERPOD. 51 days. All American bronze winner. Pods are brittle, fleshy meaty, stringless and 4½ to 5 inches in length. Beans are white with pink eyes.

TOPCROP. 52 days. All-American award in 1950. It definitely is a much talked-of variety now, for the home garden or nearby marketing but not for shipping. Round, green pods, brown seeded when dry.

WHITE HALF RUNNER 60 days. Taller than most Bush varieties, but does not require poles. Popular as a green bean as well as dry. Not stringless. Pods 4 inches in length.

TOP NOTCH GOLDEN WAX. 50 days. This is a comparatively new strain of Wax Bean and generally regarded as an improvement over Rustless Golden Wax. Pods are 5 inches long, flat, straight, and yellow. White seed, brown eye.

SHENANDOAH VALLEY'S MODERN SEED HOUSE

FORDHOOK LIMA

LIMA BEANS

Lima Beans are very susceptible to cold and seeds should not be planted until the ground becomes thoroughly warm. They should be sown on well-enriched land, with the rows 3 feet apart, placing the Beans 3 inches apart in the row. Plant about 1½ inches deep, ½ pound to 50 feet of row.

Treat Garden Seeds With Arasan

We urge you to treat all garden seeds with du Pont's Arasan. It improves germination and general health of plants, making them more resistant to disease. Comparative results are as striking and convincing as that of the Nitragin. Effective on all garden seeds. Beans and peas should be treated with Arasan a day or so in advance, then inoculated with Nitragin at time of planting 1 oz. 50 cts. 8 ozs. \$1.00.

Bush Varieties

Burpees Improved Bush. 75 days. Produces large pods which contain 4 or more thick Beans. The dry Beans are flat, greenish white.

Fordhook Bush Lima. 75 days. Thick, meaty pods containing 3 or 4 seeds. Both the green shell and the dry Beans are large and plump.

Fordhook 242. Continues to increase in popularity. Chosen for All-America award several years ago and repeated for both 1953 and 1954. This fact alone indicates that it is the best bush lima developed for some years. Large foliage and spread. Yields well in hot weather.

Fordhook Baby Lima. 70 days. Bush about 14 inches high, erect and runnerless. Dark glossy green pods 2½ inches long, with 3 or 4 Beans. Excellent for canning.

Hendersons Bush (Baby Lima). 65 days. A popular canning variety. Pods contain 3 or 4 seeds. Dry Beans are white.

Pole Varieties

Big Six. In recent years this Lima has gained in use and popularity. It has large, flat, pure white seeds.

King of the Garden. 88 days. An improved strain of the large white Pole Lima. Pods 5 to 6 inches long, containing 4 or 5 large Beans of good quality.

Red-Speckled Pole. 88 days. Large flat Bean. Very prolific and of excellent quality.

Sieva or Carolina. 75 days. Popular pole Butter Bean, with pods 3 inches long. Early, prolific, and of excellent quality.

GERMACO HOTKAPS

Help you have SURE CROPS

3 weeks earlier

Mature your crops two to three weeks earlier. Get premium prices and bigger yields by protecting your plants with HOTKAPS, patented wax paper cones—miniature hothouses—that keep out frost, rain, wind,

birds and insects. They maintain a perfect mulch around each plant, promoting sturdy growth.

FREEZONIAN PEAS

INOCULATE PEAS WITH NITRAGIN

Garden Peas belong to the legume family of plants which should be inoculated. Nitragin is the leading inoculant. If your Peas are inoculated with Nitragin, it will make a big difference in both yield and quality. Garden-size package 25 cts.

PEAS

Plant the seed an inch deep and an inch apart in rich, well-drained soil in early spring, and every two weeks after that until June. Sow it in double rows 6 to 8 inches apart, and the rows 2 to 3 feet apart. Smooth-seeded varieties may be planted as soon as the soil is workable, but wrinkled-seeded kinds should not be planted until the ground is warm. A pound of seed sows 100 feet of drill.

BUSH VARIETIES

- American Wonder.** 60 days. Short pods well filled with tender, wrinkled Peas. Height 1 ft.
- Blue Bantam.** 60 days. Market-gardeners variety. Well-filled pods holding 8 to 10 Peas. Very productive and strong growing. Height 15 in.
- Dwarf Grey Sugar.** 62 days. Heavy producer of broad flat pods which are delicious when cooked. Seed brown and wrinkled. Height 2 ft.
- Early Alaska.** Wilt-resistant. 58 days. Round dark green pods containing 5 to 8 smooth, tender Peas. Height 2½ to 3 ft.
- Early Bird.** 60 days. Pods deep green, rather broad containing 8 or 9 large, semi-wrinkled green Peas. Fine for the home garden. Height 20 in.
- Laxtons Progress.** 64 days. Vines 1½ feet high, bearing heavy crops of large pods, holding from 8 to 10 wrinkled Peas.
- Little Gem or Marvel.** 62 days. Vines 15 inches high bearing round pods in pairs. Large, deep green, wrinkled Peas. Heavy producer.
- Notts Excelsior.** 62 days. A popular medium-early wrinkled Pea of excellent quality. Height 14 in.
- Wando.** 68 days. Bred for tolerance of hot weather. Pods are dark green, blunt and well filled with 7 or 8 tender, medium-sized Peas of fine quality. For home use, canning and freezing. Vigorous and prolific.

POLE VARIETIES

- Freezonian.** 63 days. Deep freezers play a large part in present-day food supplies. Peas are a popular vegetable for freezing, and almost any Pea can be frozen satisfactorily if harvested at the right time. This variety is especially recommended for the freezer, as well as for immediate eating.
- Telephone.** 70 days. Long pods containing 8 to 10 large, green wrinkled Peas of fine flavor. Height 3½ to 4 ft.
- Thomas Laxton.** 62 days. Rapid-growing vine, reaching 3 feet. Pods long, well filled to the end with cream-colored, wrinkled Peas. Excellent for the home garden.

BLACK EYE PEAS FOR TABLE USE

- Ramshorn Black Eye.** Pure white Peas with black eyes. Wilt-resistant.

WETSEL'S SWEET CORN

HYBRID AND STANDARD STRAINS

Plant in well-fertilized land after it has become warm and dry in the spring. Two ounces of seed will plant 50 feet. If in rows, space the seed 3 inches apart, with 2 feet between rows, and thin the young plants to 10 inches apart. Or plant six seeds to a hill, thin to three plants, and space the hills 2 feet apart each way.

Treat All Corn Before Planting

For better germination and for more disease-resistant plants, we urge our customers to treat all of their Sweet Corn and Pop Corn with either du Ponts Arasan or Ortho Isotox 25.

HYBRID SWEET CORN

COUNTRY GENTLEMAN. 90 days. A fine variety with ears 6½ to 7 inches long; slender white kernels set irregularly instead of in rows. The seed we offer is produced from carefully bred selected strains.

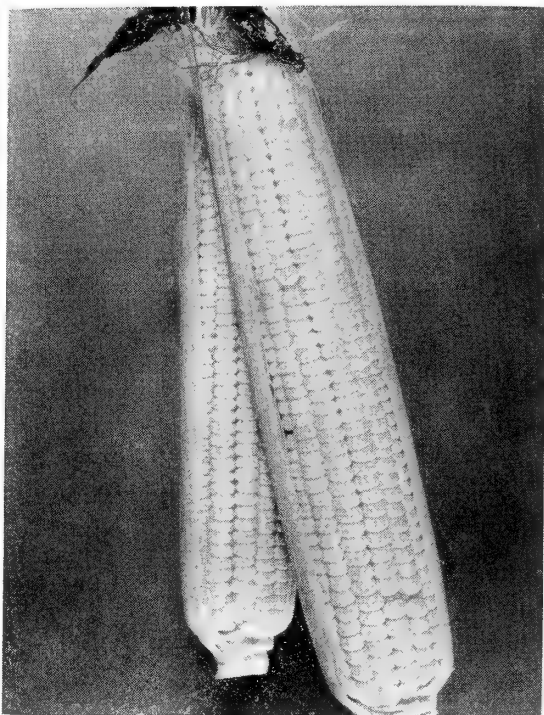

GOLDEN BEAUTY HYBRID (Yellow) A new early hybrid which won the All-American Silver Medal for 1955. Matures in 73 days and is an unusual good yielding corn for such a short maturity. Ears are 7½ inches and very tender grown on a 5½ to 6 foot stalk. Kernels are bright gold with very little interior silk. Quality good.

GOLDEN CROSS BANTAM. 88 days. Wilt-resistant. An excellent producer of 8-inch yellow ears with 19 to 14 rows of kernels. Matures a few days later than Golden Bantam.

GOLDEN GRAIN (Suckerless) Stalks are 8 feet tall with practically no suckers and bright, dark green leaves. Ears are 8 to 9 inches long with 16 to 18 rows of unusually deep kernels. Excellent husk covering which reduces bird and insect damages. 90 days.

IOANA. 87 days. Resistant to drought and wilt. Largely planted in the South and Southeast or wherever worms are likely to infest the crop. The 8-inch ears have 12 to 14 rows of cream-yellow kernels; an especially heavy husk protects the ear from birds and worms.

IOCHIEF. 89 days. Rated by the experts as an outstanding yellow hybrid.

GOLDEN CROSS BANTAM (Hybrid)

—**MARCCROSS.** 71 days. A good second early hybrid. Ears 7 to 7½ inches, 10 to 14 rows, yellow kernels. Considering early maturity, it is very prolific and of good quality. Rated five days later than Spancross.

MIDGET HYBRID (Yellow) Matures three to four days earlier than Spancross and produces an average ear of 6 to 6½ inches on a 4½ foot stalk. Has two ears with very little suckers. Quality is extremely good for an early Corn.

STOWELL'S EVERGREEN. 93 days. Developed from crossing inbred evergreen lines. Widely grown by market gardeners and canners, particularly in the East. Ears 7 to 9 inches long and 16 or 18-rowed bear white kernels.

THE WETSEL SEED CO., INC.

SHENANDOAH VALLEY'S MODERN SEED HOUSE

GOLDEN ACRE CABBAGE CABBAGE

Start indoors in January or February, and transplant to the open ground, setting the plants 18 inches apart in rows 2 to 2½ feet apart. An ounce of seed will produce about 2000 plants. For fall crops, the seed may be sown directly in the row. Plenty of nitrogen-rich fertilizer and frequent cultivation are necessary.

Chinese or Celery Cabbage

Michihili...75 days. Resembles celery and Cos lettuce, with tall cylindrical heads. For early use, sow seeds in hotbed in February, for later use, sow early in June. Plants mature in from twelve to fifteen weeks will not stand frost.

BEETS

Light, well-fertilized loam is best for growing Beets. Successive plantings at two-week intervals are preferable, using an ounce of seed for a 50-foot row, and 6 to 8 pounds for an acre. Sow in rows 1½ feet apart, and when the plants are about 2 inches high, thin to 3 inches apart. Beet tops are among the most vitamin-rich products of the whole vegetable garden. For winter storage, late Beets may be packed in moist soil in a cool cellar.

Mangel-Wurzel or Stock Beets

Sow from April to July, in drills 2 feet apart, thinning to 10 inches apart. Sow 6 pounds of seed per acre.

SWISS CHARD

Sow the seed about an inch apart and an inch deep, in rows 1½ to 2 feet apart. When 3 or 4 inches high, thin to 8 to 10 inches apart. An ounce of seed plants 50 feet of row.

BEST FOR CABBAGE WORMS

The best remedy or preventive known for cabbage worms is a Rotenone product—a dust preparation that contains at least .75% of Rotenone dust. We suggest Blue Dragon.

CAULIFLOWER

Grown like cabbage. Leave 2 feet between plants and 3 feet between rows. When the heads are about 8 inches across, tie up the outer leaves to aid in blanching. An ounce of seed produces about 2000 plants.

EARLY SNOWBALL CAULIFLOWER

CITRON PRESERVING

(95 Days) Used for making preserves and sweet-meats and for stock feeding. Enormously productive, keeps for months. Grow them as you do watermelons, but not near your melon patch. Green Seed Pkt. 10cts, ½ oz. 20 cts., oz. 35 cts

SHENANDOAH VALLEY'S MODERN SEED HOUSE

CARROTS

For home use, sow at two-week intervals in rich deep loam, in rows 18 to 20 inches apart. When plants are a few inches high, thin to 2 to 3 inches apart. An ounce of seed plants 100 feet of row, 3 to 4 pounds an acre.

GOLD PAK CARROT

AAS 1957

(75 Days) A refined bunching carrot with smooth, rich orange roots, long and slender. In addition, short strong tops give it an appealing appearance. Pkt. 25c; ½ oz. 35c; 1 oz. 55c.

DILL

2 to 2½ feet. The green leaves are nice for flavoring soups, stews and sauces, also used extensively in a minced state with lettuce. Dry or green branches and seeds are much prized for flavoring dill pickles and making dill vinegar. Very easily grown, popular herb of strong aromatic odor.

COLLARDS

Sow outdoors and thin or transplant to 2 feet apart. An ounce of seed will sow 100 feet of row.

IMPROVED LONG GREEN

CUCUMBERS

Sow seed after danger of frost is past, using eight to ten seeds to hill spaced 3 to 5 feet apart. An ounce of seed plants 50 hills.

SMOOTHIE. All-American selection for 1957. The fruit has no warts nor spines and are glossy deep green. The white flesh is faintly tinged with green just under the skin. The flavor and quality are very high. Pkt. 25 cts.

HYBRID, Early Sure Crop. This a genuine hybrid strain, featured as such by us for the last four years. Like hybrid strains of other crops, its popularity is spreading rapidly and consistently. Pkt. (40 seeds) 30 cts.

CORN SALAD

(55 Days) A delightful salad that can be served like lettuce or cooked like spinach. For summer use plant from early spring until April. Fall planting during August and September to produce salad during the fall. Make the drills a foot apart, cover the seeds half an inch, press the soil firmly and give it the same cultivation as for spinach.

CRESS (Upland)

Sow in spring in rows a foot apart, cover seed ¼ inch. Ready to cut in four or five weeks.

CELERY

Grows best in moist, fertile loam. Sow the seed indoors, and transplant 6 inches apart, with 2½ feet between rows. Use boards, heavy paper, or soil around the plants for blanching. An ounce of seed produces about 5000 plants.

PLANTS

We carry a complete line of Tomato, Onion, Cabbage, Cauliflower, Strawberry, Broccoli, Pepper, and Celery Plants in season. Also many type of both annual and perennial flower plants for bedding and containers.

We suggest you visit our store and inspect our plants.

SHENANDOAH VALLEY'S MODERN SEED HOUSE

GRAND RAPIDS LETTUCE

LETTUCE

Head Lettuce should be spaced about a foot apart, but loose-leaf kinds can be set closer together. Sow in rich soil and transplant. An ounce of seed plants 300 feet of row.

ENDIVE

Sow in March for an early crop and in July for a second one. Space the plants about 8 inches apart in rows 1½ feet apart. Blanching is accomplished by tying the outer leaves over the heart of the plant. An ounce plants 150 feet.

EGGPLANT

Sow the seed early indoors and transplant outdoors in late May. Allow 2 feet between plants and about 3 feet between rows. An ounce produces about 1000 plants.

KALE OR BORECOLE

May be sown from May to September and is not harmed by cold weather. Plants should be about 18 inches apart, in rows 2½ feet apart. An ounce sows 200 feet of row.

KOHLRABI

Plant in early spring, at the rate of an ounce for 200 feet of row. Thin the plants to stand 6 inches apart, in rows 18 inches apart. Use the bulbs while they are young and tender.

OKRA

Plant after the ground is warm and dry, and space the seed 6 inches apart in the row. Thin to 18 inches apart. An ounce sows 50 feet of row.

ONIONS

Start seed indoors and set out the young plants in rich, well-drained soil, after frost is past. They should be spaced 4 inches apart, with 18 inches between rows. An ounce will sow 100 feet of drill.

LEEK

Plant in February, March and September. Culture—Superior to onions for soup flavoring, etc. Plant early in the spring in a light, rich, moist soil in drills half an inch deep. When 6 to 8 inches high trim off the tops and roots and transplant 3 to 4 inches apart in 18-inch rows setting the plants in the ground up to their center leaves, and earth up to blanch the necks. One ounce will plant about 100 feet of drill.

MUSTARD

Seed may be sown in spring or fall an ounce to 100 feet of row. Thin to 6 inches apart, in rows 18 inches apart.

GOURDS

Rapid-growing vines with variously shaped fruits which are dried and used as ornaments (a few have utilitarian value).

SUPER MARKET MUSKMELON

FI HYBRID

84 days. A sweet delicious flavored muskmelon with deep salmon meat. Produces an oval shap melon measuring 7 inches long and 6 inches diameter. Weighs 4-5 lbs. A very high yielder produced on vigorous vines. Resistant to Fusarium and Downey Mildew. Skin tan and slightly white netted. Pkt. 50c; 1/4 oz. \$2.50.

PEPPERS

Start seed in a hotbed in early spring and transplant the seedlings to the open ground after all danger of frost is past. Set them 18 inches apart each way in land that is not too rich. An ounce of seed will produce about 1200 plants.

RUBY KING PEPPER

RADISH

To be tender and crisp, Radishes must be grown quickly in rich moist soil. Sow the seed in the open ground, at intervals during the summer, for a continuous crop, or under glass from February to October. An ounce of seed plants 100 feet of row.

Winter varieties should be planted in July or August and dug before frost. Stored in the cellar.

CHAMPION AAS 1957

(24 days). The brightest cherry-red Radish. Pull it small or let it grow as big as a silver dollar and it will still be crisp and solid. True ball shape with thin tap-root. Good-sized top makes it a good buncher. Recommended for home and market gardens. Pkt 25c, oz. 50c, 1/4lb. \$1.25, lb. \$3.00 postpaid.

PARSNIP

Sow in rows early in the spring and thin to 6 inches apart, with 18 inches between rows. The flavor is improved by leaving the roots in the ground over winter. An ounce sows 200 feet of row.

PARSLEY

Soak the seed overnight before planting, to hasten germination. Cover it lightly and protect with boards. An ounce sows 200 feet of row.

PUMPKINS

Plant four to six seeds in hills about 8 feet apart, after all danger of frost is past, or interplant it with corn. Thin to three plants to a hill. On ounce will plant 25 hills.

THE WETSEL SEED CO., INC.

SHENANDOAH VALLEY'S MODERN SEED HOUSE

SALSIFY (Oyster Plant)

Sow outdoors in early spring in light, mellow soil, thinning to 5 inches apart in rows a foot apart. May be left in the ground all winter, like parsnips. An ounce of seed sows 50 feet of row.

SQUASH

Sow seed in early spring, in hills about 4 feet apart for bush varieties, and 6 to 8 feet for the running sorts. Winter varieties should be stored in a warm place. An ounce of seed plants 25 hills of the summer varieties, 20 hills of the winter kinds.

SPINACH

Sow seed outdoors in early spring and at ten-day intervals until late April. For a fall crop, sow in August and for a winter one, in September or October. Thin the young plants to 4 inches apart, in rows 18 inches apart. An ounce of seed sows 100 feet of row.

WATERMELON

Grown like muskmelons, but the hills should be 8 to 10 feet apart. An ounce of seed plants 30 hills.

TURNIP

Sow in early spring, and for winter use make another sowing in mid-summer or early fall. Seedlings should be thinned to stand 4 or 5 inches apart in rows 12 to 15 inches apart. An ounce of seed sows 100 feet of row.

HYBRID TOMATOES

Hybrid strains of Tomato become more popular each year. This fact becomes more evident as time passes. They possess greater vitality and are consequently more resistant to blight, wilt and other diseases, thereby resulting in higher yield and better quality fruit.

RUTGERS VALIANT F-1 (First Generation Hybrid) Large, smooth, deep red tomato of very fine quality. We introduced this Hybrid to our section in 1953 and has been an outstanding tomato since. 67 days. Pkt. 35 cts. 1/16 oz. \$1.50, 1/4 oz. \$2.25.

EARLY GIANT F-1 (First Generation Hybrid) 60 days. Largest early fruited hybrid offered with a heavy yield. Deep globe shape, deep red color, thick wall, excellent interior, free from white core. Vines are strong and vigorous. Fruit is spaced in large clusters, bearing over a long period. Pkt 35 cts., 1/16 oz. \$3.00, 1/4 oz. \$5.00.

GIANT KING F-1 (First Generation Hybrid) 80 days, an outstanding Hybrid introduced in 1955. A giant size mid-season Hybrid. Very smooth, bright scarlet color, deep globe shape. Pkt. 35 cts., 1/16 oz. \$3.00, 1/4 oz. \$5.00.

WONDER BOY F-1 (First Generation Hybrid) 68 Days. Introduced in 1954, bred for extremely large size fruit and heavy yield. Is a meaty smooth tomato of excellent flavor. Pkt. 35 cts., 1/16 oz. \$3.00, 1/4 oz. \$5.00

†BURPEE'S BIG BOY (R) F-1. First Generation Hybrid) 78 days. Very large fruited, perfectly smooth, firm scarlet-red, thick walled fruit with bright red meaty flesh of fine flavor and excellent quality. 1 Pkt. 50 cts., 2 pkts 95 cts. 3 pkts. \$1.35; 5 pkts. \$2.15; 1/4 oz \$7.50

Wee Willie—Sweet William

ANNUAL HEIGHT 4 TO 6 INCHES

A new ultra dwarf and compact type of Sweet William. The bright flowers are in combination of crimson, ruby, deep rose pink and white. Ideal for use as an edging plant or for window boxes. Pkt. 25 cts., 1/8 oz. \$1.00.

SEEDS OF ANNUAL CLIMBERS

Packet 15 cts.

Balloon Vine. A rapid growing annual climber producing white flowers, followed by inflated seed-pods.
 Canary-bird Vine. Small, fringed bright yellow blooms.
 Cypress Vine. Brilliant scarlet, star-shaped flowers 1 1/2 inches long. Delicate, fern-like foliage.
 Morning-Glory, Heavenly Blue. Shining sky-blue flowers.
 M., Scarlett OHara. Carmine.
 M., Imperial. Very large blooms in mixed colors. Sow in the open ground when the weather has become warm.
 Scarlet Runner Bean. Bright red, pea-like flowers followed by pods of beans that are red when dry.

THE WETSEL SEED CO., INC.

Outstanding Annual Flowers

ASTERS

For massing in the garden and for cutting. Asters furnish most attractive flowers in late summer and fall. Bonemeal rather than barn-yard manure is recommended as a fertilizer. Be particular not to plant Asters two successive years in the same location.

California Sunshine 3 feet fine gilled yellow center.

Pkt. 15 cts. $\frac{1}{8}$ oz. 95 cts.

Los Angeles. Large, double, shell-pink flowers on plants $2\frac{1}{2}$ feet high, Pkt. 15 cts. $\frac{1}{8}$ oz. 75 cts.

Wilt Resistant Strain

All Wilt-Resistant Varieties, Mixed. Pkt. 15 cts. $\frac{1}{8}$ oz. 95 cts.

Ballet Pkt. 20 cts.; $\frac{1}{8}$ oz. 90 cts.

Crego, $2\frac{1}{2}$ feet tall, large feathery flowers, mixed. Pkt. 15, $\frac{1}{8}$ oz. 75 cts.

Early Giant Peony flowered mixed colors. Pkt. 15 cts. $\frac{1}{8}$ oz. 80 cts.

Giants of California. White. Pkt. 15 cts.; $\frac{1}{8}$ oz. 85 cts.

Giants of California. Purple. Pkt. 15 cts.; $\frac{1}{8}$ oz. 85 cts.

Giants of California, Improved. Huge flowers like Chrysanthemums, borne on long stems from late summer to frost. Mixed colors. Pkt. 15 cts. $\frac{1}{8}$ oz. 75 cts.

Hearts of France Branching $2\frac{1}{2}$ -3 feet medium size dark red flowers. Pkt. 15 cts. $\frac{1}{8}$ oz. 80 cts.

Powder Puff 2 feet bearing quilled long stem. Entire plant to be cut as one bunch. Pkt. 20 cts. $\frac{1}{8}$ oz. \$1.25

LARKSPUR

Giant Imperial. Base-branching type, long bloom spikes. Mixed colors- light and dark blue, carmine, pink and white. Pkt. 15c. $1/8$ oz., 65c.

Giant Imperial, Lilac King. Fully double flowers of clear lilac on spikes ideal for cutting. Very upright plants. Pkt. 15 c. $1/8$ oz., 65c.

Giant Imperial. White. Pkt. 15 cts. $\frac{1}{8}$ oz. 65 cts.

Pink King. Pkt. 15c. $1/8$ oz., 65c.

MARIGOLDS

One of the most dependable plants for the summer garden. Easy to grow, they furnish plenty of color in brilliant shades of yellow, orange, and maroon.

Burpee Gold, improved Orange (odorless foliage) $2\frac{1}{2}$ ft. Pkt. 15 cts. $\frac{1}{8}$ oz. 95 cts.

Color Magic (Dwarf) interesting Color hybrids Pkt. 15 cts.; $\frac{1}{8}$ oz. 65 cts.

Crackerjack, Large double flower 4-5 inches in a wide range of Marigold colors. Pkt. 25 cts.

Chrysanthemum-flowered mixed. Large chrysanthemum-like blooms. Pkt. 15 cts. $1/8$ oz., 65c.

Dwarf French. Monarch Strain. A highly selected strain of double flowers in shades of mahogany, striped or edged golden yellow. Very floriferous. Pkt. 15c., $1/8$ oz., 65c.

Glitters. The chrysanthemum type of Marigold which won the All-America award in 1951 and has now taken its place among the top varieties. Pkt. 20 c. $1/8$ oz., 1.00.

Golden Ring Tagetes Segnata Pumila, dwarf, lacy foliage with hundreds of small golden-orange flowers. Pkt. 15 cts, $\frac{1}{8}$ oz. 80 cts.

Man-in-the-Moon, one of the newest and finest creamy lemon yellows. Pkt. 15 cts $\frac{1}{8}$ oz. 95 cts.

Naughty Marietta, single with maroon blotch. Pkt. 15 cts. $\frac{1}{8}$ oz. 60 cts.

Marigold Petite. Annual. Average Height 6 inches. A distinct and entirely new class of Marigolds bearing an abundance of all-double flowers which cover the entire plant. This strain fills a need for a very early flowering Marigold which remains dwarf and uniform the entire season. Pkt. 25 cts. $\frac{1}{8}$ oz. \$1.00

Tall African Orange, 30 to 36 inches tall, dark orange. Pkt. 15, $\frac{1}{8}$ oz. \$1.00.

Tall Double African. Large, globular flowers in mixed colors. Tall mixed plants, reaching $2\frac{1}{2}$ feet. Pkt. 15c.

PETUNIAS

A favorite for bedding and for use in window-boxes. Blooms from early summer to late fall.

Balcony. Long, sprawling plants 18 inches high. Single flowers 3 inches across, especially good for window-boxes. Mixed colors—white, rose, and blue. Pkt. 15c.

Carnival. Bedding type. Pkt. 25 cts.

Comanche. A new hybrid. Bold single flowers of rich scarlet-red, well above foliage. Always in bloom and true to color. Useful for beds and borders. Pkt. 30 cts., Supply limited.

Violacea. Plants bear many free flowering deep velvety purple single edge plants for borders and bedding. Pkt. 15 cts.

Fire Chief. The All-American Winner for 1950. Although it did not fully live up to advance claims, it is a very beautiful shade of red. Pkt. 20 cts.

Fire Dance (F-1 Hybrid) Rich salmon-scarlet, well fringed; yellow throat. Semi-compact, dwarf. Pkt. 35 cts.

Flaming Velvet. Bedding type, strong growing, free flowering velvety blood red with plain single edge flowers. Pkt. 15 cts.

Giants of California. Ruffled, mixed colors in a variety of lovely shades, with pronounced yellow throats. Pkt. 35 cts.

Glitters. F-1 Hybrid Nana Compacta, brilliant scarlet, tipped white, Pkt. 35 cts.

Hybrid Varieties in Wide Mixture. Pkt. 15 cts.

Red Satin F-1 Hybrid All-American 1957, Scarlet Red, more brilliant than Comanche. Pkt. 50 cts.

Pale Face. All White, single plain edge. Pkt. 35 cts.

Prima Donna. All American 1955, $2\frac{1}{2}$ to 4 inches across, bright rose pink fringed. Pkt. 35 cts.

Rose Gem. Miniature flower only 2 inches in diameter, of deep rich rose color. Compact, 6-inch plants, blooming freely. Pkt. 15 cts.

Snowball. Dwarf compact, free flowering, large white round flowers low growing bedding plants. Pkt. 15 cts.

Maytime All-American 1958. (F-1 Hybrid) a 100% Grandiflora free flowering, clear, light salmon-pink fringed petunia. Very uniform, compact, spreading plant for bedding, borders or boxes. Pkt. 50 cts.

RED SATIN PETUNIA—AAS 1957

Zinnias

Indispensable where showy, continuous color is wanted in the summer garden. The many types and colors provide an almost unlimited range, some of them very desirable for cut-flowers.

Blaze. The new and sensational Zinnia, All-American Winner for 1954. Scarlet-orange flowers 5 inches across, with quilled and curled petals. Profuse bloomer, 30 to 36 inches tall. Pkt. 20 cts. ½ oz. \$1.00.

California Giants, Mixed. Large flower of compact form, with the petals lying flat. Wide color-range. Plants 2½ feet high. Pkt. 15 cts. ½ oz. 50 cts.

Crown of Gold. Mixed colors. Pkt. 15 cts. ½ oz. \$1.00

Dahlia-flowered, Mixed. Flowers resemble the Show Dahlia in form, wide color-range. Plants 2½ feet tall. Pkt. 15 cts. ½ oz. 50 cts.

UMBALATUM ERECTUM, Finest glowing red
50 cts. each. 3 for \$1.35, 6 for \$2.40

Winter Care

Many insects and diseases live over the winter on stored bulbs—to prevent this, follow this treatment—Put bulbs in large paper sack. Weigh or estimate the number of pounds. For each pound put 1 Tbs. of Botano de luxe Garden Dust in the sack. Close top, shake thoroughly, lay bulbs out for storage with space between each bulb. Store them for the winter in a cool, dry place.

AT THE END OF THE SEASON Some bulbs must be dug up each fall and stored over winter. Among them begonias, dahlias, gladiolus, cyclamen.

When Ordering By Mail

For bulbs not postpaid, add 25 cents for 1st dozen, 5 cents for each additional dozen.

BEGONIAS, Tuberous-Rooted

(Belgian Grown)

No other bulbous plant has increased in popularity in recent years as has this type of Begonia. Our sales are mounting each year. They are suitable for either indoor pots or outdoor growing and provide a continuous feast of beauty until cut down by frost. They are strikingly beautiful and are the subject of favorable comment wherever seen. Double Camellia Type available in Scarlet, Yellow, White, Pink, and Copper. Top size bulbs 32 cts. each 6 for \$1.60, \$3.00 per dozen.

TUBEROUS BEGONIA COLLECTION

This package contains 12 first size imported bulbs of Double Camellia Begonias with a well balanced color assortment.
Box of 12 \$1.65 at store, \$1.90 postpaid.

CANNAS

Top Size Bulbs—Waxed

pink
RECONCAVO, rose center with carmine ribs
45 cts., each, 3 for \$1.25, \$4.50 per doz.

THE WETSEL SEED CO., INC.

Wetsel's Gladiolus

MINIATURE GLADIOLUS

Collection of 25 bulbs measuring 1¼" or more in diameter selected from the leading Miniature varieties in a wide range of colors. These bulbs are ideally suited for border planting and the flowers they produce can be used very successfully in artistic flower arrangements. Box of 25 \$1.40 at store. \$1.60 postpaid.

Wetsel's Dependable Mixture

We have our usual stock of mixed colors which have proved so popular over the years. 6 cts. each, 60 cts. per doz. at store... Postage extra.

THRIPS

These small, slender, sucking insects are only about 1/25 inch long. They form colonies and rasp and puncture plant cells. On bulbs, and especially on gladiolus this results in a silvering of leaves and discoloring of flower petals—often in streaks. Regular spraying will keep thrips inactive. When the bulbs' new shoots are 6 inches long use improved Isotox Garden Spray or D.D.T. for this control. ..

GENERAL EISENHOWER
HARRISONBURG, VA.

WEED AND BRUSH KILLERS

Monsanto 2, 4-D Amine Weed Killer

(4 lbs. Acid Equivalent)

The 2, 4-D amine salt is the most economical of all formulations. It is effective for the selective control of certain broad-leaved annual and perennial weeds in resistant crops such as small grains, corn, pastures and non-cropped areas. Safer to use than Ester Formulations around susceptible crops.

Monsanto 2, 4-D Butyl Ester Weed Killer

(2.67 lbs. Acid Equivalent)

Effectively controls hard-to-kill perennial weeds and woody brush growing in resistant crops, fence rows and pastures.

Monsanto 2, 4-D Butyl Ester Weed Killer

(4 lbs. Acid Equivalent)

Same formulation as above except more acid equivalent per gallon making this the most economical strength by a large margin.

Monsanto Low Volatile Ester Weed Killer

(4 lbs. Acid Equivalent)

Effectively controls hard-to-kill perennial weeds and woody brush growing in resistant crops, rights-of-way, fence rows and pastures. Has proven to be very outstanding for the control of Wild Onions, Shoe String (Coral Berry) and Canada Thistle.

Monsanto Butyl Ester Brush Killer

(2 lbs. 2, 4-D plus 2 lbs. 2, 4, 5-T)

An inexpensive Brush killer to be used on non-cropped land. Excellent for right-of-ways fence rows and pastures. Use where drift is not a problem.

Monsanto Low Volatile Brush Killer

(2 lbs. 2, 4-D & 2 lbs. 2, 4, 5-T)

An excellent economical Brush Killer to be used near susceptible crops. Outstanding for fence rows right-of-ways and pasture land.

Monsanto Low Voiatile 2, 4, 5-T

2, 4, 5-T is the most effective Brushkiller on the market today.

TRIOX

An Arsenical Weed Killer in liquid form which prevents plant growth for one to two years. Kills all vegetation. Quarts \$1.19 Gallon \$3.50.

WETSEL'S *Tested* Lawn Grass

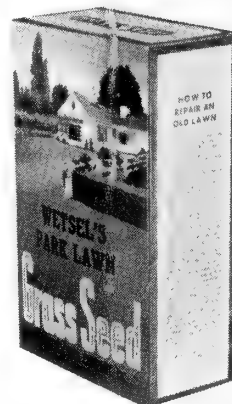

"The Best for Virginia"

WETSEL'S GREEN ISLAND

You will always be safe in using our Green Island Lawn Grass as it contains the finest grasses available. Regardless of the price you pay for your Lawn Grass Seed we still feel that Green Island is your best buy where a permanent lawn is desired. It has been used by home owners for many years. In other words, it is top quality lawn grass seed at a reasonable price.

WETSEL'S PARK LAWN GRASS

Our Park Lawn Grass contains permanent grasses and it is recommended where a quick lawn is desired or for late Spring or Fall seeding. It will take more abuse while young and due to the types of grasses used in this mixture it is especially good for banks and terraces. This mixture also contains three of the same grasses used in Green Island. The price is most reasonable for a mixture of this type.

WETSEL'S SHADY LAWN GRASS

You can now purchase Grass Seed for shady places, however, grass seed alone will not do the job. Under trees and protected places, it is important to add additional seed and fertilizer each year and to water more often during dry spells. You can have a beautiful lawn under trees and other shady spots but it will require just a little more care. Our Shady Lawn Grass will do the job.

MERION BLUE GRASS

The main attributes of Merion Blue Grass is its ability to resist leafspots that thin out stands of other Blue Grass allowing weed infestation, (1) its ability withstands close mowing, (2) heat and drought tolerance. It can now be purchased for just about one-third the original price. It is now being used in much larger quantities. Prices are: 1 lb. \$1.95; 5 lbs. or more \$1.90 per lb.

WESCO TURF MIXTURE

Where a customer desires more Blue Grass Seed than the average Mixture contains we recommend our WESCO TURF MIXTURE. It contains the same grasses as our GREEN ISLAND LAWN MIXTURE but more Blue Grass Seed. It is a very good Lawn Grass but we do not consider it any better than our Green Island.

Cyclone Hand \$3.95
Cyclone Hand, Heavy Duty.... 5.25
Horn 1.60

We Have Added Additional Cleaning Machinery

Two new Seed Cleaning Machines have recently been installed to further improve our seed service. Other equipment will be installed by July to take care of small grains which will increase our capacity and quality of our products. WETSEL'S facilities include the most modern Seed Cleaning Machines.

Also, we have several mixing machines for blending-to-order any special formula or order. Only clean, high germinating seeds are used in blending and mixing.

Take advantage of OUR SERVICE through your local dealer or at our store.

Starting a Lawn? - Read This

Building a home is a great experience and very rewarding, and this includes your lawn. New home owners are thrilled to know or to anticipate the thought of living in a new home for the first time. We can't think of any material used in building a home where the quality and price will vary as much as the price of lawn grass seed. If you are looking for cheap seed, this is unwise—it is also unwise to pay the high price some seed is being sold for. A good yard stick is to sow seed with approximately 75% Ky. Blue Grass; 10% Red Top; 10% Poa Trivialis and the balance Bent Grass and White Dutch Clover. This mixture should sell for just a little over \$1.00 per pound. WETSEL'S GREEN ISLAND LAWN GRASS contains the above grasses.

USE GRASS MIXTURES BLENDED FOR LOCAL CONDITIONS — NOT NATION WIDE USE.

MAINTAINING A GOOD LAWN

One of the common mistakes is the idea that after your lawn has been established it will need no attention, except for mowing and watering in real dry weather. Never think of taking care of your lawn as work but as pleasure and joy. On old or established lawns fertilize in late February or March at the rate 30 pounds of 6-10-4 per 1000 square feet and on bare spots sow Ky. Blue Grass from February 1 to May 1. After this date your chances of receiving any benefit from the Blue Grass is very slim. And don't overlook your Weed Killers.
